

Press Release

DE-CIX chooses Smartoptics open line system for upgrading and future-proofing its backbone network with 400G capacity

Frankfurt am Main, 20 July 2020. [DE-CIX](#), the world's leading Internet Exchange operator, prepares for the steadily growing data traffic by choosing [Smartoptics](#) open line system for upgrading and future-proofing its backbone network with 400G capacity. The new network will improve customer experience through smoother and faster provisioning and simplify network operations while massively reducing costs. The first implementations at DE-CIX Frankfurt have already started with other DE-CIX locations to follow.

Experiencing a yearly traffic growth of about 30% at its exchanges, more during last year's pandemic lockdowns, DE-CIX needed to upscale its network. To increase network capacity quickly and efficiently, staying ahead of customer expectations, the Internet Exchange provider has upgraded its network to 400G based on Smartoptics open line system.

Dr. Thomas King, CTO at DE-CIX, says: "With this latest technological leap, we prepare for the digital future. Having followed Smartoptics' development as a key advocate for open line systems over the years, we were confident that this was the right choice for us. 400G technologies are an important key to DE-CIX's future growth in order to prepare for upcoming traffic growth. The new 400G network solution is exciting on several levels. It will enable us to create an entirely new experience for our customers, with simpler and faster service provisioning. Since the new type of network requires fewer infrastructure components, it will also allow us to simplify network architecture and operations – you might even say plug & play – while reducing the cost."

Smartoptics open line system at DE-CIX backbone

The solution will be based on the DCP-M40-ZR+ open line system, optimized for coherent 400G connectivity, with embedded optics. DCP-M has the form factor and usability of a passive multiplexer, but, unlike a passive multiplexer, it monitors the traffic, amplifies the signals for longer distances, and can handle higher data rate protocols.

“We are excited that DE-CIX, as the world’s leading Internet Exchange operator, is showing their confidence in Smartoptics product’s when upgrading and upscaling their mission-critical network. That our solutions for 400G connectivity fits DE-CIX global deployment of open line systems and bandwidth optimized routers is clear proof of our successful strategy for open and disaggregated networking solutions,” says Magnus Grenfeldt, CEO Smartoptics.

###

About DE-CIX

DE-CIX (German Commercial Internet Exchange) is the world’s leading operator of Internet Exchanges. In total, at its 28 locations at Europe, North America, the Middle East, and Asia, DE-CIX interconnects over 2300 network operators (carriers), Internet service providers (ISPs), content providers, and enterprise networks from more than 100 countries, offering peering, cloud, and interconnection services. The combined connected customer capacity of all DE-CIX locations worldwide exceeds 75 Terabits, making it the largest neutral interconnection ecosystem in the world. DE-CIX in Frankfurt, Germany, with a data throughput of more than 10 Terabits per second (Tbps) and over 1000 connected networks, is one of the largest Internet Exchanges in the world.

About Smartoptics

Smartoptics provides innovative optical networking solutions and devices for the new era of open networking. Our customer base includes thousands of enterprises, governments, cloud providers, Internet exchanges as well as cable and telecom operators. We have an open networking approach in everything we do which allows our customers to break unwanted vendor lock-in, remain flexible and minimize costs. Our solutions are used in metro and regional network applications that increasingly rely on data center services and specifications. Smartoptics is a Scandinavian company founded in 2006. We partner with leading technology and network solution providers such as Brocade, Cisco, HPE, and Dell EMC and have a global reach through more than 100 business partners.
